DNBulletin: Blockchain technology offers opportunities

Datum 30 augustus 2017

Theme Payments

Our own tests

In order to properly assess the possibilities, we are researching, analysing and testing distributed ledger technology in both a national and an international context. By conducting our own hands-on experiments we can obtain a better understanding about what this technology can offer and its advantages and disadvantages.

More efficient markets and cost savings

With efficiency gains in mind, many financial institutions are looking into how they can harness this technology for a variety of purposes: a uniform infrastructure and decentralised storage of data require fewer intermediaries, processes are more streamlined and communication between market participants is easier. The introduction of distributed ledger technology in the financial sector will also require adjustments on the part of central banks and supervisory authorities.

Better financial resilience

It is possible that distributed ledger technology can increase the financial system's resilience. If all decentralised computers share all information, and collectively comprise the entire infrastructure of the system, then the loss of one or several computers can be absorbed by the remaining ones which have the correct information. This also lowers operational risks. Distributed ledger technology may also provide better resilience against cyberattacks.

Our plans for 2018

Develop projects outside of The Netherlands

Export knowledge to other countries

The Netherlands' **International Blockchain Collaboration**

Do you want to add a public sector blockchain ecosystem to the map?

Send us an email:
koen@blockchainprojects.nl
marloes@blockchainprojects.nl

THE NETHERLANDS

- Dutch Blockchain Coalition (private public partnership) launched in 2016
- 50 blockchain projects run by the Dutch Government

CANADA

Working together to unlock the potential of self sovereign identity for secure and seamless travel.

NEW YORK:

UNITED NATIONS

Blockchain projects launched by several UN Agencies (2016-ongoing)

- Book on the legal aspects of Blockchain (in collaboration with UNOPS)
- Blockchain mission (September 2018)

WASHINGTON DC: WORLD BANK

Start of the World Bank Blockchain Lab (2017)

- Blockchain side event during the spring meeting of the World Bank
- Pilot with the World Bank on Palm Oil

BRUSSELS:

EUROPEAN UNION

EU Blockchain Observatory and Forum (2018)

- Working with Benelux and the EU Commission to co-create the right conditions for the advent of an open, innovative, trustworthy, transparent, and EU law compliant DLT driven data and transactional environment.

MALTA

Malta Blockchain Strategy Taskforce 2017

- Collaboration on diploma's and certificates

DUBAI

Ambition: the first blockchain-powered government in the world by 2020

- Participates in several conferences, first meetings with the government

SCANDINAVIAN COUNTRIES

Scandinavian Blockchain Association (private public partnership) launched in 2017

- Collaboration & joint hackathon in 2018
- Interreg project that involves municipalities in the Netherlands, Germany, Belgium, Sweden and Denmark.

INDIA

First Hackathon + Roadmap (Feb 2018)

- Working on a blockchain MOU + joint projects

SINGAPORE

FinTech hub
Clear regulations for ICO's (Nov. 2017)

- First Blockchain- trade mission (Nov 2017)
- 3-year collaboration between NL and Singapore on blockchain and security

- Book on blockchain use cases for the public sector
(collaboration The Netherlands/Belgium)
- Book on the legal aspects of blockchain
(collaboration with the United Nations and a consortium of lawyers and blockchain experts)

THANK YOU

Do you want to help grow a **global
public sector blockchain
ecosystem?**
